Model 773 Electric Beam Barrier System

advancing vehicle barrier technology

DESCRIPTION:

- *Hydraulic or Electric operation
- *DOD/ASTM Crash Rating of M30/P1 (15,000lbs @ 30 mph) (DOS K4/L3)
- *Full road coverage with barriers sizes ranging from 8ft-24ft.
- *Simplified, low maintenance design
- *Advanced intelligence for accident prevention, event recording, and ACP scenarios
- *Superior corrosion protection for long-term durability
- *Extreme vehicle weight capability

Introducing the most advanced and intelligent beam on the market

The Model 773 is not just another crash rated barrier. There are many products available that can stop a vehicle but this product takes it another step.

The Model 773 not only stops vehicles but is intelligent enough to track the vehicle and pedestrians in the vicinity to prevent accidental operation as well as record the events during operation.

This intelligence coupled with its unparalleled reliability will propel this industry to higher standard.

Standard barrier configuration includes a custom engineered low weight extrusion arm, an energy absorption insert assembly, the hinge post, the receiver/latch post, an integral lighting solution and is operated by an automatic control system.

MODEL 773 M30 ELECTRIC/HYDRAULIC BEAM

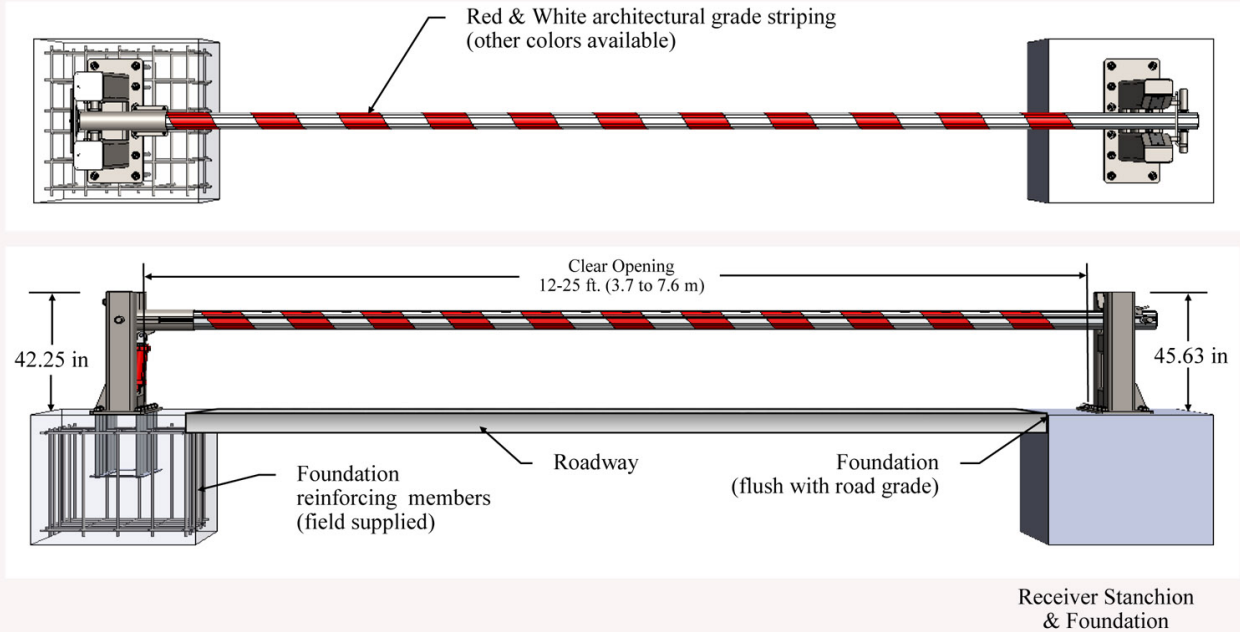

773 Series crash beam barriers are available in hydraulic, electric or manual styles. These units can integrate with any and all access control devices and are supplied with premiere options allowing the unit to be extremely reliable and intelligent.

Additional options like the integrated LED light strips ensure the barrier is highly visible in all weather conditions. Model series 773 crash barriers can be highly customized. For additional options and configurations please contact TAG.
